A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn and John Taylor, two of the founders of the Internet, met at the Bell Labs. Kahn and Taylor were working on a project to create a network of networks, which would eventually become the Internet. Kahn and Taylor's work was funded by the Defense Advanced Research Projects Agency (DARPA). In 1982, Kahn and Taylor published their paper, "A Framework for the Design of a Computer-Based Packet Network," which laid out the basic principles of the Internet. This work was a key factor in the development of the Internet, and it is one of the most important documents in the history of the technology.
