### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

**RCA**

1985

**The Last Decade of Western**  
The formation of MCI was a result of a number of factors. In 1981, the Federal Communications Commission (FCC) approved a plan for the creation of a new long-distance carrier. This led to the formation of MCI Telecommunications Corporation in 1982. The company was initially owned by a group of investors, including the U.S. Postal Service, which provided a significant portion of the initial capital. In 1985, MCI was publicly traded on the New York Stock Exchange. The company's success was largely due to its innovative services, including its "Weekend Saver" program, which allowed customers to make long-distance calls at a reduced rate during weekends and evenings. This program was a major competitive advantage for MCI, as it allowed the company to attract a large number of customers who were looking for cost-effective long-distance services. In 1988, MCI was acquired by American Telephone and Telegraph (AT&T), which was then the largest telecommunications company in the world. The acquisition was a landmark event in the history of the telecommunications industry, as it marked the first time that a major telecommunications company had been acquired by another major telecommunications company. The acquisition was completed in 1988, and MCI became a subsidiary of AT&T. The acquisition was a result of AT&T's desire to expand its long-distance services and to compete more effectively with MCI. The acquisition was a major success for AT&T, as it allowed the company to significantly increase its market share in the long-distance market. The acquisition was also a major success for MCI, as it allowed the company to benefit from AT&T's resources and expertise. The acquisition was a landmark event in the history of the telecommunications industry, and it remains one of the most significant acquisitions in the industry's history.

## WFD 2025

Provided by Mark Godbout N6IV

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.

**Winter Field Day January  
25th, 2025**

Winter Field Day is an exciting annual event for amateur radio enthusiasts, taking place on the last full weekend of January. It offers a unique opportunity for radio operators to set up field operations in remote locations, enabling them to connect with other participants worldwide. You may choose to participate solo or get your your friends, family, or whole club involved. Winter Field Day is organized by the Winter Field Day Association. The association strongly believes that ham radio operators should practice portable emergency communications in winter environments. This is because freezing temperatures, snow, ice, and other hazards pose unique operational concerns.
