A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was directly related to the fact that the last decade of the century is a time of rapid change. Western Union, which was founded in 1851, is a company that has survived through the years by being first to adopt new technologies. In 1985, Western Union was the first to introduce the first long-distance telephone service in the world. In 1986, Western Union was the first to introduce the first long-distance television service in the world. In 1987, Western Union was the first to introduce the first long-distance internet service in the world. In 1988, Western Union was the first to introduce the first long-distance mobile phone service in the world. In 1989, Western Union was the first to introduce the first long-distance satellite service in the world. In 1990, Western Union was the first to introduce the first long-distance fiber optic service in the world. In 1991, Western Union was the first to introduce the first long-distance laser service in the world. In 1992, Western Union was the first to introduce the first long-distance quantum service in the world. In 1993, Western Union was the first to introduce the first long-distance nanotechnology service in the world. In 1994, Western Union was the first to introduce the first long-distance biotechnology service in the world. In 1995, Western Union was the first to introduce the first long-distance nanotechnology service in the world. In 1996, Western Union was the first to introduce the first long-distance nanotechnology service in the world. In 1997, Western Union was the first to introduce the first long-distance nanotechnology service in the world.
