A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former Bell Labs researcher, and John T. Dunlop, a former AT&T executive, founded Western Union. Kahn and Dunlop were both interested in developing a new communication system that would be more efficient and reliable than the existing Bell System. In 1981, Kahn and Dunlop were joined by a third partner, Thomas A. Love, a former AT&T executive who had been instrumental in the development of the Bell System's long-distance network. The three partners formed Western Union, which was initially a subsidiary of AT&T. However, in 1982, AT&T decided to divest itself of its non-telecommunications assets, and Western Union was sold to a group of investors led by Kahn and Dunlop. In 1983, the company was renamed MCI Telecommunications Corporation. MCI's first major success came in 1984 when it launched its first long-distance service, which was a significant challenge to Bell System's long-distance monopoly. MCI's success was due to its use of a new technology called "dual in-line" (DIL) signaling, which allowed MCI to offer lower rates than Bell System. In 1985, MCI's success led to a major restructuring of the Bell System, which resulted in the creation of the Federal Communications Commission (FCC) as a regulatory body for the telecommunications industry. The FCC's decision to allow MCI to compete with Bell System was a landmark event in the history of the telecommunications industry. In 1986, MCI's success led to a major restructuring of the Bell System, which resulted in the creation of the Federal Communications Commission (FCC) as a regulatory body for the telecommunications industry. The FCC's decision to allow MCI to compete with Bell System was a landmark event in the history of the telecommunications industry.

ARRL Vice President Visit

WFD 2025

Provided by Mark Godbout N6IV

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.
