A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and a group of investors formed MCI Telecommunications Corporation. Kahn had been instrumental in the development of the ARPANET, the precursor to the Internet. He was also a pioneer in the development of packet-switching technology. Kahn's vision was to create a national network of fiber-optic cables that would provide a faster and more reliable means of communication. This network would be owned and operated by a private company, MCI. Kahn's plan was to build a network that would be able to handle a wide range of traffic, including voice, data, and video. This network would be able to compete with the AT&T network, which was the dominant force in the telecommunications industry at the time. Kahn's plan was to build a network that would be able to handle a wide range of traffic, including voice, data, and video. This network would be able to compete with the AT&T network, which was the dominant force in the telecommunications industry at the time.
