A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and John T. Dunlop, a former Western Union executive, decided to start a new company. Kahn and Dunlop were joined by other former Bell Labs researchers, including Paul Baran, and together they formed MCI Telecommunications Corporation. MCI's first major success was in 1981 when it launched the first long-distance toll-free service, MCI Mail. This service allowed customers to send mail through the telephone network, a significant innovation at the time. MCI's success in this market led to its rapid growth and the acquisition of Western Union in 1985. The acquisition of Western Union was a major milestone for MCI, as it gave the company access to Western Union's extensive network of telegraph and telephone lines. This network was a key asset for MCI, as it allowed the company to provide a wide range of telecommunications services, including long-distance telephone, telegraph, and data services. MCI's acquisition of Western Union also gave the company a strong presence in the international market, as Western Union had a global network of lines. MCI's success in the telecommunications market was a result of its innovative services and its strong network. MCI's growth was rapid, and it became one of the leading telecommunications companies in the United States. MCI's success was a result of its focus on innovation and its commitment to providing high-quality services to its customers. MCI's success was a testament to the power of innovation and the importance of a strong network in the telecommunications industry.
