A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and his colleagues at Western Union decided to start a new company. Kahn had been working on a project called "packet switching" which was a key technology for the development of the Internet. He and his colleagues saw the potential of this technology and decided to start a company to develop and market it. The company was named MCI Telecommunications Corporation and was founded in 1980. MCI was the first company to offer a nationwide packet-switched network. This network was used to connect computers and other devices across the country. MCI's network was a major success and it helped to establish MCI as a leading telecommunications company. In 1985, MCI was acquired by WorldCom, which was then the largest telecommunications company in the world. WorldCom's acquisition of MCI was a major event in the history of telecommunications. It marked the beginning of a new era of consolidation in the industry. WorldCom's acquisition of MCI also helped to establish WorldCom as a major player in the telecommunications market. Today, WorldCom is a leading telecommunications company and its acquisition of MCI is considered one of the most important events in the history of the industry.
