A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on packet-switching technology at Bell Labs, and he saw the potential for a new kind of communication network. He and his partners raised money and started MCI Telecommunications Corporation in 1980. MCI's first major success came in 1981 when it launched its first long-distance service, MCI Mail. This service allowed users to send and receive mail through a computer terminal. MCI's success in this market led to its expansion into other areas of telecommunications. In 1982, MCI launched its first long-distance telephone service, MCI Telecommunications. This service was a major success for MCI, and it led to the company's rapid growth. By 1985, MCI had become a major player in the telecommunications industry. The success of MCI was a result of Kahn's vision and the company's focus on innovation. MCI's success in the 1980s paved the way for its continued success in the 1990s and beyond.
