A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and a group of investors formed Western Union. Kahn was a pioneer in the field of packet switching and had been working on a project called "The Last Decade of Western" since 1975. The project was a plan to build a new communication network that would bypass the AT&T monopoly. Kahn's vision was to create a network that would be owned and operated by a group of independent companies. This network would be able to compete with AT&T's monopoly on long-distance telephone service. Kahn's plan was to build a network that would be able to handle a wide range of services, including voice, data, and video. This network would be able to compete with AT&T's monopoly on long-distance telephone service. Kahn's plan was to build a network that would be able to handle a wide range of services, including voice, data, and video. This network would be able to compete with AT&T's monopoly on long-distance telephone service.
