### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and his partners founded Western Union. Kahn had been working for AT&T for many years and had developed a vision of a new kind of communication network. He had seen the potential of a network that would connect people and businesses in a way that was faster, more reliable, and more efficient than the traditional telephone network. He had also seen the need for a network that would be owned and controlled by the people who used it. Kahn and his partners decided to form Western Union, a company that would provide a new kind of communication service. They would use a network of fiber-optic cables and satellite links to provide a service that was faster and more reliable than the traditional telephone network. They would also use a variety of other technologies, including digital switching and packet switching, to provide a service that was more efficient and more cost-effective than the traditional telephone network. Western Union was founded in 1980 and was initially a subsidiary of AT&T. However, in 1985, AT&T decided to divest itself of Western Union and sell it to a group of investors led by Kahn. This sale marked the beginning of MCI's independent existence. MCI went on to become a major player in the telecommunications industry, competing with AT&T and other companies for market share. MCI's success was due in large part to its innovative use of technology and its commitment to providing high-quality service to its customers. MCI's story is a testament to the power of innovation and the importance of providing a better service to the people who use it.

## WFD 2025

Provided by Mark Godbout N6IV

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.

**Winter Field Day January  
25th, 2025**

Winter Field Day is an exciting annual event for amateur radio enthusiasts, taking place on the last full weekend of January. It offers a unique opportunity for radio operators to set up field operations in remote locations, enabling them to connect with other participants worldwide. You may choose to participate solo or get your your friends, family, or whole club involved. Winter Field Day is organized by the Winter Field Day Association. The association strongly believes that ham radio operators should practice portable emergency communications in winter environments. This is because freezing temperatures, snow, ice, and other hazards pose unique operational concerns.
