### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

RCA

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in the late 1970s. In 1978, Robert Kahn and Andrew S. Tanenbaum published their paper "End-to-end Arguments for Computer-Based Architectures," which argued for a more flexible and robust network architecture. This led to the development of the TCP/IP protocol suite, which became the foundation of the Internet. In 1982, the Federal Communications Commission (FCC) approved the creation of a new class of service for long-distance telephone calls, known as "enhanced service." This allowed for the development of new services, such as videoconferencing and telepresence. In 1983, MCI launched its first long-distance service, known as "MCI Mail." This service allowed users to send and receive mail through a computer terminal, using a dedicated network of lines. In 1984, MCI launched its first long-distance service, known as "MCI Telecommunications." This service provided a range of services, including long-distance calling, teleconferencing, and videoconferencing. In 1985, MCI launched its first long-distance service, known as "MCI Telecommunications." This service provided a range of services, including long-distance calling, teleconferencing, and videoconferencing.
