A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and a group of investors formed Western Union. Kahn was a pioneer in the field of packet switching and had been working on a project called the "blue box" for several years. He had also been involved in the development of the ARPANET, the precursor to the Internet. Kahn's vision was to create a new kind of communication network that would be more efficient and more reliable than the traditional telephone network. He believed that this network would be essential for the future of business and industry. Kahn's idea was to create a network that would be based on a series of interconnected nodes, each of which would be able to communicate with any other node in the network. This network would be able to handle a wide variety of traffic, including voice, data, and video. Kahn's vision was to create a network that would be able to handle a wide variety of traffic, including voice, data, and video. Kahn's vision was to create a network that would be able to handle a wide variety of traffic, including voice, data, and video.
