A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on packet-switching technology at Bell Labs, and he had a vision of a new kind of network that would allow people to communicate more easily and cheaply than ever before. In 1980, Kahn and his partners founded MCI Telecommunications Corporation. The company's first major success came in 1981 when it launched the first long-distance toll-free service in the United States. This service, known as MCI Mail, allowed people to send and receive mail over long distances without paying extra charges. MCI's success in this market led to its expansion into other areas of telecommunications, including long-distance telephone service and data transmission. In 1985, MCI was acquired by WorldCom, which later merged with Sprint to form SBC Communications. Today, MCI's legacy lives on through its contributions to the development of the Internet and other modern communication technologies.
