A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on a project called "packet switching" and had developed a network of computers that could communicate with each other. This network was the foundation of the Internet. Kahn and his investors wanted to create a company that could provide a similar service to the public. They called it MCI Telecommunications Corporation. The company was founded in 1980 and began operations in 1981. MCI's first service was a long-distance telephone service. This service was a success and led to the company's expansion into other telecommunications services. In 1985, MCI launched its first satellite-based service, MCI Mail. This service allowed users to send and receive mail through a satellite. MCI Mail was a major success for the company and led to its expansion into other satellite-based services. In 1988, MCI launched its first cable-based service, MCI Video Mail. This service allowed users to send and receive video mail through a cable. MCI Video Mail was another major success for the company and led to its expansion into other cable-based services. In 1996, MCI launched its first fiber-optic-based service, MCI Global Voice. This service allowed users to make long-distance calls through a fiber-optic network. MCI Global Voice was a major success for the company and led to its expansion into other fiber-optic-based services. In 1997, MCI launched its first wireless-based service, MCI Global Mail. This service allowed users to send and receive mail through a wireless network. MCI Global Mail was another major success for the company and led to its expansion into other wireless-based services.

PURE MOUNTAIN FUN IS

MECHANICAL WAVES

- Easy to understand
- Can try at home
 - rope, tension vs. motion
- Speed is reasonable
- Fun to watch
 - Shake wave machine
 - big one at MIT 26.100
