A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1981 when Robert E. Kahn, a former Bell Labs scientist, and John T. Dunlop, a former Bell Labs executive, founded Western Union. Kahn and Dunlop were both involved in the development of the ARPANET, the precursor to the Internet. Kahn was also a key figure in the development of the X.25 protocol, a standard for packet-switched networks. Dunlop was a leading expert in the field of data communications. The two men's shared interests in data communications led them to form Western Union, which was initially a subsidiary of the parent company. However, Kahn and Dunlop eventually broke away from Western Union to form MCI, which was founded in 1985. MCI was a pioneer in the field of long-distance telecommunications, and it played a major role in the development of the Internet. MCI was also a major player in the field of satellite communications, and it was one of the first companies to offer satellite-based services. MCI's success was largely due to its innovative approach to telecommunications, and its focus on providing high-quality, reliable services to its customers. MCI's legacy is still felt today, as many of the services and technologies that it pioneered are still in use today.
