A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and John T. Dunlop, a former Western Union executive, decided to start a new company. Kahn had been working on packet-switching technology at Bell Labs, and Dunlop had been working on data communications at Western Union. They met in 1980 and decided to start a company that would combine their expertise in data communications and packet-switching technology. They named the company MCI Telecommunications Corporation. MCI was founded on December 11, 1980. MCI's first major success was in 1981 when it launched its first long-distance service, MCI Mail. MCI Mail was a packet-switched mail service that allowed users to send and receive mail through a computer terminal. MCI Mail was a major success for MCI and helped to establish it as a major player in the telecommunications industry. MCI's success was due to its innovative use of packet-switching technology and its focus on providing high-quality service to its customers. MCI's success was also due to its strong financial backing from investors and the government. MCI's success was a major milestone in the history of telecommunications and helped to pave the way for the development of the Internet and other modern communication technologies.
