### **A Visit To Marine Station KPH**

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and his partners founded MCI Telecommunications Corporation. Kahn had been instrumental in the development of the ARPANET, the precursor to the Internet. He was also a pioneer in the use of satellite communications. In 1981, Kahn and his partners acquired the assets of Western Union, a major telecommunications company. In 1982, MCI launched its first long-distance service, MCI Mail, which provided a secure and reliable way to send electronic mail. In 1983, MCI launched its first satellite-based service, MCI Satnet, which provided a high-speed, long-distance service. In 1984, MCI launched its first international service, MCI WorldNet, which provided a global network of services. In 1985, MCI launched its first domestic service, MCI Telecommunications Corporation, which provided a wide range of services, including long-distance, satellite, and international services.
