### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and his colleagues at Western Union decided to start a new company. Kahn had been working on a project called "packet switching" which was a key technology for the development of the Internet. He and his colleagues saw the potential of this technology and decided to start a company to develop and market it. This company was called MCI Telecommunications Corporation. The company was founded in 1980 and was initially a subsidiary of Western Union. In 1985, MCI was spun off as an independent public company. The company's first major success was in 1988 when it launched its first long-distance service, MCI Mail. This service was a major competitor to Western Union's telex service and helped to establish MCI as a major player in the telecommunications industry. In 1997, MCI was acquired by WorldCom, which later merged with Sprint to form SBC Communications. Today, MCI is a part of SBC's telecommunications division.
