A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former Bell Labs researcher, and John T. Dunlop, a former AT&T executive, founded Western Union. Kahn and Dunlop were looking for a way to break the monopoly of AT&T in the long-distance telephone market. They decided to create a new company that would provide long-distance service over a dedicated network of fiber-optic cables. This network would be owned and operated by Western Union, and would be used to provide service to MCI. The company was named MCI Telecommunications Corporation, and was founded on December 11, 1980. MCI's first service was long-distance telephone service, and it was a success. By 1985, MCI was a major player in the long-distance market, and was a direct competitor of AT&T. MCI's success was due to its dedicated network of fiber-optic cables, which provided faster and more reliable service than AT&T's traditional copper wire network. MCI's success also led to the formation of other long-distance carriers, such as Sprint and WorldCom. The formation of MCI was a major event in the history of telecommunications, and it marked the beginning of a new era of competition in the long-distance market.
