A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former Bell Labs researcher, and his partner, Bernard L. Lasker, founded Western Union. Kahn and Lasker were looking for a way to break into the telecommunications market. They saw the potential of a new type of network, one that would be based on packet switching. This was the technology that would eventually become the backbone of the Internet. Kahn and Lasker's vision was to create a network that would be able to handle a wide variety of traffic, from voice to data. They believed that this was the only way to compete with the established telephone companies. In 1981, Kahn and Lasker founded Western Union. They were joined by a number of other investors, including a group of former Bell Labs researchers. The company's first major success came in 1982 when it was awarded a contract by the U.S. Department of Defense to develop a new type of network. This was the first time that a private company had been awarded such a contract. The contract was for a network that would be able to handle a wide variety of traffic, from voice to data. This was the technology that would eventually become the backbone of the Internet. In 1983, Kahn and Lasker founded MCI. They were joined by a number of other investors, including a group of former Bell Labs researchers. The company's first major success came in 1984 when it was awarded a contract by the U.S. Department of Defense to develop a new type of network. This was the first time that a private company had been awarded such a contract. The contract was for a network that would be able to handle a wide variety of traffic, from voice to data. This was the technology that would eventually become the backbone of the Internet.

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.
