A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and John T. Dunlop, a former Western Union executive, decided to start their own company. They were joined by other former Bell Labs researchers, including Paul Baran and Donald Davies, who had developed the concept of packet switching. The company was founded in 1981 and was initially known as MCI Telecommunications Corporation. It was a public company from the beginning and was listed on the New York Stock Exchange. The company's first major success was in 1985 when it launched its first long-distance service, MCI Mail, which was a direct competitor to Western Union's telex service. This was followed by the launch of MCI Mailnet, a nationwide network of mailboxes, and MCI Mailnet Express, a service that allowed users to send mail directly to a mailbox. In 1988, MCI launched its first long-distance service, MCI Telecommunications Corporation, which was a direct competitor to Western Union's telex service. This was followed by the launch of MCI Mailnet Express, a service that allowed users to send mail directly to a mailbox. In 1991, MCI launched its first long-distance service, MCI Telecommunications Corporation, which was a direct competitor to Western Union's telex service. This was followed by the launch of MCI Mailnet Express, a service that allowed users to send mail directly to a mailbox.
