### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and a group of investors decided to create a new company to provide long-distance telephone service. Kahn had been working for AT&T for many years and had developed a reputation as a leading expert on telecommunications. He had also been a member of the Bell System's Long Distance Department. Kahn's vision was to create a company that would provide long-distance telephone service at a lower cost than AT&T. He believed that this could be done by using a different technology for long-distance calls. Kahn's company, MCI Telecommunications Corporation, was founded in 1980. It was the first long-distance telephone company to use a different technology for long-distance calls. MCI's success was due to its use of a different technology for long-distance calls. MCI's success was due to its use of a different technology for long-distance calls. MCI's success was due to its use of a different technology for long-distance calls.
