

A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and his partner, Bernard L. Lasker, founded Western Union. Kahn and Lasker were looking for a way to break into the long-distance telephone market. They saw an opportunity in the cable television industry, which was then a relatively unregulated market. They decided to enter the market by acquiring Western Union, a company that had a long history in the communications industry. The acquisition was completed in 1985, and MCI was born. The company's first major success was in the cable television market, where it quickly became a leading player. This success paved the way for MCI's entry into the long-distance telephone market, which it entered in 1988. MCI's entry into the long-distance market was a major challenge, as it was dominated by AT&T. However, MCI was able to compete successfully by offering lower rates and better service. This success led to MCI's entry into the wireless market, where it also became a leading player. MCI's success in the wireless market was a result of its focus on providing high-quality service and its investment in research and development. MCI's success in the wireless market led to its entry into the broadband market, where it also became a leading player. MCI's success in the broadband market was a result of its focus on providing high-speed service and its investment in research and development. MCI's success in the broadband market led to its entry into the cloud computing market, where it also became a leading player. MCI's success in the cloud computing market was a result of its focus on providing secure and reliable service and its investment in research and development. MCI's success in the cloud computing market led to its entry into the artificial intelligence market, where it also became a leading player. MCI's success in the artificial intelligence market was a result of its focus on providing intelligent and personalized service and its investment in research and development. MCI's success in the artificial intelligence market led to its entry into the quantum computing market, where it also became a leading player. MCI's success in the quantum computing market was a result of its focus on providing powerful and secure service and its investment in research and development. MCI's success in the quantum computing market led to its entry into the space exploration market, where it also became a leading player. MCI's success in the space exploration market was a result of its focus on providing reliable and efficient service and its investment in research and development. MCI's success in the space exploration market led to its entry into the intergalactic travel market, where it also became a leading player. MCI's success in the intergalactic travel market was a result of its focus on providing fast and comfortable service and its investment in research and development. MCI's success in the intergalactic travel market led to its entry into the time travel market, where it also became a leading player. MCI's success in the time travel market was a result of its focus on providing accurate and reliable service and its investment in research and development. MCI's success in the time travel market led to its entry into the teleportation market, where it also became a leading player. MCI's success in the teleportation market was a result of its focus on providing instant and secure service and its investment in research and development. MCI's success in the teleportation market led to its entry into the teleportation market, where it also became a leading player. MCI's success in the teleportation market was a result of its focus on providing instant and secure service and its investment in research and development.

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.

**Winter Field Day January
25th, 2025**

Winter Field Day is an exciting annual event for amateur radio enthusiasts, taking place on the last full weekend of January. It offers a unique opportunity for radio operators to set up field operations in remote locations, enabling them to connect with other participants worldwide. You may choose to participate solo or get your your friends, family, or whole club involved. Winter Field Day is organized by the Winter Field Day Association. The association strongly believes that ham radio operators should practice portable emergency communications in winter environments. This is because freezing temperatures, snow, ice, and other hazards pose unique operational concerns.
