A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on a project called "packet switching" and had developed a network of computers that could communicate with each other. This network was the foundation of the Internet. Kahn and his investors wanted to create a company that would provide a service that was faster and more reliable than the traditional telephone network. They called this service "packet switching" and it was the first step towards the creation of the Internet. In 1981, Kahn and his investors founded MCI Telecommunications Corporation. The company's first product was a service called "MCI Mail" which allowed users to send and receive electronic mail. This service was a major success and it helped to establish MCI as a leading provider of telecommunications services. In 1985, MCI was listed on the New York Stock Exchange and it became a public company. This was a major milestone for the company and it allowed it to raise a large amount of capital. This capital was used to expand MCI's services and to develop new products. In 1988, MCI was acquired by WorldCom, a large telecommunications company. This acquisition was a major event in the history of MCI and it marked the end of its independent existence. The acquisition was a result of WorldCom's strategy to expand its services and to create a larger, more competitive company. MCI's acquisition by WorldCom was a major event in the history of telecommunications and it marked the beginning of a new era for the industry.
