A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn and Andrew Seltzer, two former employees of Western Union, decided to start their own company. Kahn and Seltzer had been working for Western Union for several years and had become disillusioned with the company's management. They decided to leave and start their own company, MCI Telecommunications Corporation. The company was founded in 1980 and was initially a small, privately held company. However, it grew rapidly and became a major player in the telecommunications industry. In 1985, MCI was publicly traded on the New York Stock Exchange. The company's success was due to its innovative services, including long-distance telephone service, fax service, and data transmission. MCI was a pioneer in the use of fiber optic technology for long-distance communication. The company's success led to its acquisition by WorldCom in 2000.
