A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and his partners founded MCI Telecommunications Corporation. Kahn had been instrumental in the development of the ARPANET, the precursor to the Internet. He was also a pioneer in the use of satellite communications. In 1981, MCI launched its first satellite-based service, MCI Mail, which allowed users to send and receive electronic mail. This was a major breakthrough in the history of the Internet. In 1982, MCI launched its first long-distance telephone service, MCI Telecommunications. This was another major breakthrough, as it allowed users to make long-distance calls at a much lower cost than AT&T. In 1983, MCI launched its first international telephone service, MCI International Telecommunications. This was a major breakthrough in the history of international telecommunications. In 1984, MCI launched its first international satellite-based service, MCI International Satellite Telecommunications. This was a major breakthrough in the history of international satellite telecommunications. In 1985, MCI launched its first international satellite-based service, MCI International Satellite Telecommunications. This was a major breakthrough in the history of international satellite telecommunications.
