A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former AT&T executive, was recruited to lead a new venture capital-backed telecommunications company. Kahn, who had previously worked for AT&T, saw the potential for a new kind of long-distance service that would bypass the traditional telephone network. He recruited a group of investors, including several former AT&T executives, and set up a company called Western Union Telecommunications. The company's first major success came in 1983 when it secured a contract with the U.S. Postal Service to provide long-distance service to rural areas. This contract was a major breakthrough for the company, as it provided a steady stream of revenue and helped to establish MCI as a major player in the telecommunications industry. In 1985, MCI was publicly traded on the New York Stock Exchange, and its stock price rose sharply. By the end of the decade, MCI had become one of the most valuable telecommunications companies in the world.
