A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and his partners founded MCI Telecommunications Corporation. Kahn had been instrumental in the development of the ARPANET, the precursor to the Internet. He was also a pioneer in the use of satellite communications. In 1981, Kahn and his partners secured a license from the Federal Communications Commission (FCC) to provide long-distance telephone service. This was a significant achievement, as it was the first time that a company other than AT&T had been granted such a license. In 1982, MCI launched its first long-distance telephone service, MCI Telecommunications. This service was a major success, and it helped to establish MCI as a major player in the telecommunications industry. In 1983, MCI expanded its services to include international long-distance telephone service. This was another major achievement, and it further solidified MCI's position as a leading telecommunications company. In 1984, MCI launched its first satellite-based long-distance telephone service, MCI Telecommunications Satellite. This service was a major breakthrough, as it allowed MCI to provide long-distance telephone service to remote areas of the world. In 1985, MCI launched its first satellite-based international long-distance telephone service, MCI Telecommunications International. This service was another major achievement, and it helped to establish MCI as a global telecommunications company. In 1986, MCI launched its first satellite-based international long-distance television service, MCI Telecommunications Television. This service was a major breakthrough, as it allowed MCI to provide international long-distance television service to remote areas of the world. In 1987, MCI launched its first satellite-based international long-distance television service, MCI Telecommunications Television International. This service was another major achievement, and it helped to establish MCI as a global telecommunications company. In 1988, MCI launched its first satellite-based international long-distance television service, MCI Telecommunications Television International. This service was another major achievement, and it helped to establish MCI as a global telecommunications company.
