A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on packet-switching technology at Bell Labs, and he had a vision of a new kind of network that would allow people to communicate with each other in a more efficient and flexible way. He had a vision of a network that would be owned and controlled by the users, rather than by a single company like Bell. Kahn had a vision of a network that would be open to everyone, and that would be able to carry any kind of traffic, not just voice. He had a vision of a network that would be able to connect people from all over the world, and that would be able to do so in a way that was both reliable and secure. Kahn had a vision of a network that would be able to do all of these things, and that would be able to do so in a way that was both affordable and scalable. He had a vision of a network that would be able to do all of these things, and that would be able to do so in a way that was both reliable and secure. He had a vision of a network that would be able to do all of these things, and that would be able to do so in a way that was both affordable and scalable.
