A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former Bell Labs researcher, and his partner, Bernard L. Lasker, founded MCI Telecommunications Corporation. Kahn and Lasker were looking for a way to break the Bell System's monopoly on long-distance telephone service. They saw an opportunity in the emerging market for satellite-based long-distance service. In 1981, MCI launched its first satellite-based long-distance service, MCI Telecommunications Corporation. This service allowed customers to make long-distance calls at a lower cost than the Bell System. In 1982, MCI expanded its service to include international long-distance service. In 1983, MCI launched its first satellite-based long-distance service, MCI Telecommunications Corporation. This service allowed customers to make long-distance calls at a lower cost than the Bell System. In 1984, MCI expanded its service to include international long-distance service. In 1985, MCI launched its first satellite-based long-distance service, MCI Telecommunications Corporation. This service allowed customers to make long-distance calls at a lower cost than the Bell System.
