### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

**The Last Decade of Western**  
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and John T. Dunlop, a former Western Union executive, founded MCI Telecommunications Corporation. Kahn and Dunlop were both former employees of Western Union, and they had both worked on the development of the ARPANET, the precursor to the Internet. Kahn had also worked for AT&T, and he had been instrumental in the development of the Bell System's long-distance network. Dunlop had worked for Western Union for many years, and he had been instrumental in the development of the company's long-distance network. The formation of MCI was a result of Kahn and Dunlop's desire to create a new company that would be able to compete with AT&T in the long-distance market. MCI was founded in 1980, and it quickly became a major player in the long-distance market. In 1985, MCI was acquired by American Telephone and Telegraph (AT&T). The acquisition was a result of AT&T's desire to create a more integrated long-distance network. The acquisition was completed in 1985, and MCI became a part of AT&T's long-distance network. The acquisition was a significant event in the history of the telecommunications industry, and it marked the end of MCI's independent existence.
