A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former Bell Labs researcher, and his partner, Bernard L. Losh, founded MCI Telecommunications Corporation. Kahn and Losh were looking for a way to break the Bell System's monopoly on long-distance telephone service. They saw the potential of a new technology called packet switching, which allowed data to be sent in small packets over a shared network. This technology was used by the military and universities, but not by the public. Kahn and Losh wanted to bring this technology to the public. They needed a lot of money to do this. They raised money from investors and from the public. They also got help from the government. In 1981, MCI was granted a license to provide long-distance telephone service. This was a big deal. It was the first time that a company other than Bell had been allowed to do this. MCI started providing service in 1982. It was a success. MCI's service was faster and cheaper than Bell's. It was also more reliable. MCI's success led to the formation of other long-distance carriers. This led to the end of Bell's monopoly. In 1984, the Supreme Court ruled that Bell's monopoly was illegal. This led to the breakup of Bell in 1984. MCI was one of the companies that survived the breakup. MCI is now a major long-distance carrier. It is also a major provider of internet service. MCI is a public company. It is listed on the New York Stock Exchange. MCI's stock is traded under the ticker symbol MCI.
