A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on a project called 'packet switching' and had developed a network of computers that could communicate with each other. This network was the foundation of the Internet. Kahn and his investors wanted to create a company that could provide a similar service to the public. They called it MCI Telecommunications Corporation. The company was founded in 1980 and began operations in 1981. MCI's first service was a long-distance telephone service. This service was a success and led to the company's expansion into other telecommunications services. In 1985, MCI launched its first satellite-based service, MCI Mail. This service allowed users to send and receive mail through a satellite. MCI Mail was a major success for the company and led to its growth into a major telecommunications provider. In 1988, MCI was acquired by WorldCom. WorldCom was a large telecommunications company that had been founded in 1983. WorldCom's acquisition of MCI was a major event in the history of telecommunications. It led to the formation of a new company, WorldCom MCI Telecommunications Corporation, which was later renamed WorldCom. WorldCom's acquisition of MCI was a key factor in WorldCom's growth and success. WorldCom went on to become one of the largest telecommunications companies in the world. WorldCom's success was a result of its focus on providing high-quality telecommunications services to its customers. WorldCom's success was also a result of its investment in research and development. WorldCom's investment in research and development led to the development of many new telecommunications services. WorldCom's success was a result of its commitment to its customers and its employees. WorldCom's success was a result of its focus on providing high-quality telecommunications services to its customers. WorldCom's success was also a result of its investment in research and development. WorldCom's investment in research and development led to the development of many new telecommunications services. WorldCom's success was a result of its commitment to its customers and its employees.
