A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on packet-switching technology at Bell Labs, and he had a vision of a new kind of network that would allow people to communicate in a more efficient and flexible way. In 1980, Kahn and his investors founded MCI Telecommunications Corporation. The company's first major project was to build a national packet-switching network, which would allow people to send data and voice messages over a single network. This network would be a major step towards the creation of the Internet. In 1981, MCI launched its first commercial service, MCI Mail, which allowed people to send electronic mail over the network. This service was a major success, and it helped to establish MCI as a leading provider of telecommunications services. In 1982, MCI launched its first long-distance telephone service, MCI Telecommunications. This service was also a major success, and it helped to establish MCI as a leading provider of telecommunications services. In 1983, MCI launched its first international telephone service, MCI International Telecommunications. This service was also a major success, and it helped to establish MCI as a leading provider of telecommunications services. In 1984, MCI launched its first satellite-based telephone service, MCI Satellite Telecommunications. This service was also a major success, and it helped to establish MCI as a leading provider of telecommunications services. In 1985, MCI launched its first video-on-demand service, MCI Video-on-Demand. This service was also a major success, and it helped to establish MCI as a leading provider of telecommunications services.

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.
