A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn and John Tompkins, two of the founders of Western Union, decided to start a new company. The company was named MCI Telecommunications Corporation and was based in Overland Park, Kansas. The company's first major success was in 1981 when it was awarded a contract by the Federal Bureau of Investigation (FBI) to provide long-distance telephone service to its field offices. This was a significant achievement because it was the first time that a private company had been awarded such a contract. The company's success was due to its innovative use of fiber-optic technology, which allowed it to provide faster and more reliable service than its competitors. In 1982, the company was awarded a contract by the United States Postal Service to provide long-distance telephone service to its rural offices. This was another major success for the company, as it demonstrated its ability to provide service to even the most remote areas. In 1983, the company was awarded a contract by the United States Department of Justice to provide long-distance telephone service to its federal offices. This was a third major success for the company, as it demonstrated its ability to provide service to the federal government. In 1984, the company was awarded a contract by the United States Department of Defense to provide long-distance telephone service to its military bases. This was a fourth major success for the company, as it demonstrated its ability to provide service to the military. In 1985, the company was awarded a contract by the United States Department of Education to provide long-distance telephone service to its schools. This was a fifth major success for the company, as it demonstrated its ability to provide service to the education sector. In 1986, the company was awarded a contract by the United States Department of Health and Human Services to provide long-distance telephone service to its hospitals. This was a sixth major success for the company, as it demonstrated its ability to provide service to the healthcare sector. In 1987, the company was awarded a contract by the United States Department of Energy to provide long-distance telephone service to its power plants. This was a seventh major success for the company, as it demonstrated its ability to provide service to the energy sector. In 1988, the company was awarded a contract by the United States Department of Transportation to provide long-distance telephone service to its airports. This was an eighth major success for the company, as it demonstrated its ability to provide service to the transportation sector. In 1989, the company was awarded a contract by the United States Department of Agriculture to provide long-distance telephone service to its farms. This was a ninth major success for the company, as it demonstrated its ability to provide service to the agriculture sector. In 1990, the company was awarded a contract by the United States Department of Commerce to provide long-distance telephone service to its businesses. This was a tenth major success for the company, as it demonstrated its ability to provide service to the business sector. In 1991, the company was awarded a contract by the United States Department of Labor to provide long-distance telephone service to its workers. This was an eleventh major success for the company, as it demonstrated its ability to provide service to the labor sector. In 1992, the company was awarded a contract by the United States Department of Housing and Urban Development to provide long-distance telephone service to its public housing projects. This was a twelfth major success for the company, as it demonstrated its ability to provide service to the housing sector. In 1993, the company was awarded a contract by the United States Department of Justice to provide long-distance telephone service to its federal offices. This was a thirteenth major success for the company, as it demonstrated its ability to provide service to the federal government. In 1994, the company was awarded a contract by the United States Department of Defense to provide long-distance telephone service to its military bases. This was a fourteenth major success for the company, as it demonstrated its ability to provide service to the military. In 1995, the company was awarded a contract by the United States Department of Education to provide long-distance telephone service to its schools. This was a fifteenth major success for the company, as it demonstrated its ability to provide service to the education sector. In 1996, the company was awarded a contract by the United States Department of Health and Human Services to provide long-distance telephone service to its hospitals. This was a sixteenth major success for the company, as it demonstrated its ability to provide service to the healthcare sector. In 1997, the company was awarded a contract by the United States Department of Energy to provide long-distance telephone service to its power plants. This was a seventeenth major success for the company, as it demonstrated its ability to provide service to the energy sector. In 1998, the company was awarded a contract by the United States Department of Transportation to provide long-distance telephone service to its airports. This was an eighteenth major success for the company, as it demonstrated its ability to provide service to the transportation sector. In 1999, the company was awarded a contract by the United States Department of Agriculture to provide long-distance telephone service to its farms. This was a nineteenth major success for the company, as it demonstrated its ability to provide service to the agriculture sector. In 2000, the company was awarded a contract by the United States Department of Commerce to provide long-distance telephone service to its businesses. This was a twentieth major success for the company, as it demonstrated its ability to provide service to the business sector.

Wrap up.

N6FRG WINTER FIELD DAY 2025

We arrived in Copperopolis at Barry's K06F0V home at 9am to a sunny blue sky and a crisp morning.

On site were Mike N6AXQ, Dee KM6ELF, Mike KB6USJ, Barry K06F0V (and xyl Cheryl), and myself, Mark N6IV. Helen KM6ELE arrived later to join the fun.

We set up a 40m doublet at 35feet, a 2 m Fm j.pole, and a 40m/80m wire antenna.

Qso's were to be had on 40m, 20m, and 10m. No contacts on 2m and we did not try 15m.

Propagation was fairly decent. We contacted HI, UT, WWA, OR, AZ, STX, NTX, ID, BC, MN, OK, NV, SDG, SF among others.

Helen and Barry made their first contesting qsos so now they are addicted like everyone else.

Clouds finally ensued and the temperature dropped to the point we said qrt.

We all are thankful to Barry and Cheryl for the accommodations, hot coffee, and homemade coffee cake.

All in all we had a good time and it was worth braving the elements for some good fellowship and ham radio.

**Winter Field Day January
25th, 2025**

Winter Field Day is an exciting annual event for amateur radio enthusiasts, taking place on the last full weekend of January. It offers a unique opportunity for radio operators to set up field operations in remote locations, enabling them to connect with other participants worldwide. You may choose to participate solo or get your your friends, family, or whole club involved. Winter Field Day is organized by the Winter Field Day Association. The association strongly believes that ham radio operators should practice portable emergency communications in winter environments. This is because freezing temperatures, snow, ice, and other hazards pose unique operational concerns.
