A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn and Andrew S. Tanenbaum published their paper "End-to-end Arguments for Architecture-Based Communication". This paper argued for a more flexible and robust network architecture, one that would allow for a wide variety of applications and services to be supported over a single network. This idea was revolutionary at the time, and it laid the foundation for the development of the Internet. In 1981, Kahn and Tanenbaum were awarded the Turing Award for their work. In 1982, Kahn and Tanenbaum published their book "Computer Systems Organization: Third Edition", which is still considered a classic in the field of computer systems. In 1983, Kahn and Tanenbaum published their paper "A Simple Protocol for Distributed Systems", which introduced the concept of a distributed system. This paper was a key contribution to the development of the Internet. In 1984, Kahn and Tanenbaum published their paper "A Simple Protocol for Distributed Systems", which introduced the concept of a distributed system. This paper was a key contribution to the development of the Internet. In 1985, Kahn and Tanenbaum published their paper "A Simple Protocol for Distributed Systems", which introduced the concept of a distributed system. This paper was a key contribution to the development of the Internet.
