### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert Kahn, a former Bell Labs researcher, and a group of investors decided to start a new company. Kahn had been working on a project called "packet switching" and had developed a network of computers that could communicate with each other. This network was the foundation of the Internet. Kahn and his investors wanted to create a company that could provide a similar service to the public. They called it MCI Telecommunications Corporation. The company was founded in 1980 and was initially a subsidiary of Western Union. In 1985, MCI was spun off as a public company. The company's first major success was in 1988 when it launched its first long-distance service. This service was a direct competitor to AT&T's long-distance service and was a major factor in the company's growth. In 1997, MCI was acquired by WorldCom. The company was then merged with WorldCom and became part of the WorldCom Corporation. The company's history is a testament to the power of innovation and the importance of networking in the modern world.
