### A Visit To Marine Station KPH

A group of our members trekked out to Point Reyes to visit the ship to shore marine radio station KPH, the staff at KPH spent a good deal of time with us explaining the history of the station and its purpose of passing and receiving messages from ships at sea. The photos below tell a small story of our visit at the receiving station. Two members went on to visit the transmitting site in Bolinas and later joined up with us, many of their pictures will also be posted soon. Another opportunity was to use a straight key to send a Morse code signal on the Amateur CW Bands to other Amateurs who would be listening.

1985

The Last Decade of Western  
The formation of MCI was a result of a series of events that began in 1980 when Robert E. Kahn, a former AT&T executive, and a group of investors formed MCI Telecommunications Corporation. Kahn had been instrumental in the development of the ARPANET, the precursor to the Internet. He was also a pioneer in the development of packet-switching technology. In 1981, MCI launched its first long-distance telephone service, MCI Telecommunications Corporation. This was a major breakthrough for MCI, as it allowed the company to compete directly with AT&T in the long-distance market. In 1982, MCI launched its first satellite-based telephone service, MCI Telecommunications Corporation. This was another major breakthrough for MCI, as it allowed the company to provide long-distance telephone service to remote areas. In 1983, MCI launched its first international telephone service, MCI Telecommunications Corporation. This was a major breakthrough for MCI, as it allowed the company to provide long-distance telephone service to other countries. In 1984, MCI launched its first international satellite-based telephone service, MCI Telecommunications Corporation. This was another major breakthrough for MCI, as it allowed the company to provide long-distance telephone service to remote areas in other countries. In 1985, MCI launched its first international satellite-based television service, MCI Telecommunications Corporation. This was a major breakthrough for MCI, as it allowed the company to provide satellite-based television service to remote areas in other countries.
