

WB6T0U-12 Reaches Mongolia

wspr

Another first for the intrepid Balloon, yesterday the 28th of November in the evening (PST) the Balloons utilized its 20m transmitter to report its position over Mongolia. Several stations on the 20m band heard the beacon one from Russia one from China and two from Japan. I'm sure David Voit was pleased to hear from WB6T0U after a several day absence during its long journey over Russia. The addition of the WSPR transmitter proved its importance in tracking. We should hear more from the Balloon as it approaches the Chinese coastline and then onto Japan!
