

High Altitude Balloon Completes One Orbit Now Trying For Two

WB6TOU

A congratulation's goes out to David Voit whose high altitude balloon WB6TOU-13 a few days ago completed one orbit. The balloon continues on, and as of this morning traveled into the North Atlantic for its second time. David, in his previous attempts always incorporated a study of why the balloon failed. He always pushed ahead in making improvements. A much improved version of the WSPR/APRS mode has made tracking information on WB6TOU-13 very consistent. May the balloon complete many more orbits.
