

# SOLAR ACTIVITY REACHES A HIGH IN CYCLE 25

With plenty of visible sunspot's currently facing Earth, the official solar flux index for January 15th is **234**. This is another new high for young Solar Cycle 25 and the highest since 2014. Should the SFI pass 237 this week, it would be the highest since 2003 during the previous Cycle 23. Check out
