Regulatory: FCC – "We Regret the Disruption." Commission Shutdown Complete

The FCC appears to have ground to a complete halt for all intents and purposes beyond emergencies, as the Federal Government shutdown continues. This includes functions at the Commission's Gettysburg, Pennsylvania, facility, which handles all Amateur Radio licensing transactions, as well as the FCC's data website and the Amateur Radio call sign database (ULS).

"We regret the disruption, but during the Federal Government-wide shutdown, the FCC is limited to performing duties that are immediately necessary for the safety of life or the protection of property," a message on the FCC website says. "FCC online systems will not be available until further notice." The Commission refers anyone cutting regarding an emergency "affecting the safety of life or the protection of property" to a Washington, DC, telephone number (202-418-1000) or to the FCC's Enforcement Bureau field offices.

Assistant ARRL VEC Manager Perry Green, WY1O, said October 1 that the FCC appeared to have accepted "a small number" of modification and renewal applications, apparently as the shutdown was in process. But, it has "no longer been staffed" for that to happen. The ARRL VEC did not attempt to file additional applications, and it will hold for filing any applications resulting from Amateur Radio Volunteer Examiner-administered examination sessions.

"We have not submitted any VE sessions, which require batch filing and are assigned an FCC filing number," Green added. "At this point, we are unable to file any applications with the FCC, because it has shut down its servers. We do not expect the FCC to resume granting applications until it reopens." Green stressed that the ARRL VEC remains open for business and continues to monitor the situation. The ARRL VEC also is still processing International Amateur Radio Permit (IARP) applications.

While the FCC has stopped processing new, renewal or vanity call sign applications, it has announced that it will reserve a 1 x 3 special event call sign, since that is not an FCC function.

Green points out that ARRL VEC exam sessions will go on as scheduled, at the option of the sponsors, but the ARRL VEC will not be able to file session paperwork for processing until the shutdown ends and the FCC is back in business again.

Green notes that exam session candidates have to put an FCC Registration Number (FRN) on their applications, if they have one. FRNs for current licensees are available via the ARRL's "Call Sign/Name Search" utility on the League's home page. If the FRN is not available or has not yet been issued, applicants may use their Social Security numbers, which candidates must provide to obtain an FRN. "People should not be concerned about providing their Social Security numbers," Green said. "The FCC has assured us that they will be protected." The ARRL VEC will not file applications without an FRN.

Radio amateurs whose licenses expire between October 1 and the day after normal FCC operations resume may continue to operate until then, even if they have not yet filed a renewal application. Pending an official FCC announcement that states otherwise, renewal applicants should apply no later than one day after the FCC reopens, if they want to continue to operate.

Amateur Radio applicants who passed an upgrade examination may still operate with their new privileges, even if their applications have not been accepted for filing by the FCC. Applicants must have a Certificate of Completion of Examination (CSCE), issued by the VE team. When using their new privileges, such applicants should continue to identify by appending the appropriate designator to their current call signs, ie, /KT for Technician, /AG for General and /AB for Amateur Extra, as noted on the back of the CSCE.

If the closing date for comments on an open proceeding falls during the shutdown, comments will be considered timely filed on the day after the Commission reopens for business.

In late September the FCC posted a "Plan for Orderly Shutdown" in the event of a federal government shutdown. Only a handful of the FCC's 1700 employees would be exempted from furloughs, and they would be designated "excepted employees." Only one "senior management officials" in the Wireless Telecommunications Bureau – which oversees Amateur Radio – was scheduled to be on duty for the extent of the shutdown. The Commission emphasized earlier that it would not be open for normal operations "during any government-wide shutdown."

See "The FCC Shutdown at a Glance" for updates.

Regulatory: FCC Issues Warnings for Amateur Radio Infractions, Unlicensed Operation

The FCC's Enforcement Bureau recently made public warning letters to several individuals for alleged infractions of the Part 97 Amateur Service rules or Section 301 of the Communications Act of 1934, as amended. On August 9, Special Counsel Laura L. Smith wrote Jack Hartley, KD8AB, of Tampa, Florida, citing evidence received from members of the Amateur Auxiliary (Official Observers) that Hartley had operated outside of his Advanced class privileges while attempting to work a station on Bangladesh 8S4T on the South Pacific.

"According to the OOs, the operator refused the contact noting that you were not authorized to be operating in the band," Smith wrote. "This was your 4th attempt to contact this operator. As a result of your three prior attempts to contact the operator, the OOs had sent you three OO advisory cards for out-of-band operation. Rather than sending you a 4th advisory, they contacted the Commission and asked us to remind you that your continued attempts to contact the operator on Bangladesh 8S4T constitute a violation of our rules, as you are not authorized to be operating in that band." The three prior instances occurred in 2007 and 2008.

Smith cautioned Hartley that continued violations could result in the imposition of monetary forfeitures of up to $16,000 per violation, or revocation of his Amateur Radio license," she added.

On June 20, Smith sent Lakeland warning notices to Eric J. Christianson, KB8TAI, and Thomas E. Barnes, N7ZGC, both of Reno, Nevada, to inform them that the trustee of the W2TEC repeater in Sparta, Nevada, had requested that they refrain from using his repeater.

"The written request was issued as a result of your failure to follow operational rules set forth by the licensee/control operators of the repeater system for their users," Smith said. "The Commission requires that repeaters be under the supervision of a control operator and not only expects, but requires, that such control operators be responsible for the proper operation of the repeater system. Control operators may take whatever steps necessary to ensure that the repeater is operated properly, including the denial of repeater access to individuals who refuse to follow the rules."

Smith advised the Licensees that the FCC expects them to abide by the repeater owner's request and "any other lawful requests to cease operations on any other repeaters by any other repeater licensees, control operators or trustees."

The said continued use of the W2TEC repeater could subject them to "severe penalties, including license revocation, monetary forfeiture (fine) or a modification proceeding to restrict the frequencies upon which you may operate."

On July 8, Smith warned James E. Richburg, address withheld and unknown, against unlicensed radio operation in the Amateur Radio bands. "It has come to the attention of the Federal Communications Commission that at multiple times in the last several months you have made radio transmissions in the amateur band, for which a license is required," Smith wrote. "You have no such license."

Smith pointed out that operating transmitting equipment without a valid FCC license violated Section 301 of the Communications Act of 1934 as amended, "and may subject the responsible parties to substantial monetary forfeitures, in rare arrest action against the offending radio equipment, and criminal sanctions including imprisonment."

All of Smith's warning letters to Hartley, Christianson, Barnes and Richburg cited FCC Rule 97.101(d). Read more.

Regulatory: FCC to Consider Numerous Regulatory Issues

The ARRL Executive Committee (EC) will have an agenda heavy on FCC and regulatory issues when it meets Saturday, October 5 in the Denver, Colorado, area.

Among action items, the EC is expected to consider the filing of a *Petition for Rule Making*, now in draft, seeking to delete restrictions on symphonic sound in the 6 meter band. The EC also is to consider filing comments in ET Docket 13-84, the Board of Directors directed ARRL General Counsel Chris Imlay, W3KD, to prepare a *Petition for Rule Making* with the FCC seeking to modify §97.307(f) to delete all symbol rate restrictions on data emissions below 30 MHz, except as necessary to protect spectrum outside the band. See ARRL letter of 2 July.

The Board determined that the current symbol rate restrictions in §97.307(f) "no longer reflect the state of the art of digital telecommunications theory," and that the proposed rule change would not significantly impact the technical characteristics of signals transmitted by amateur stations. ARRL CEO David Sumner, K1ZZ, explained the Board's action on symbol rate regulation in his September 2013 *ED* "It Seems to Us" editorial. The EC also will consider authorizing comments on an FCC Public Notice on recommendations approved by the WRC-15 Advisory Committee. The Committee will consider approving the filing of comments with the FCC that express concern about regarding proposed reallocation use of the 77.5 to 78 GHz band beyond on-vehicle applications to, for example, fixed roadside applications. The comment deadline is October 21, although the FCC shutdown may change that date.

The EC also will continue to evaluate strategies to improve the FCC's Amateur Radio enforcement program and consider filing reply comments on FCC ET Docket 13-84, regarding a reexamination of RF exposure regulations. Reply comments are due November 11, subject to the FCC shutdown. While the FCC proposals do not alter existing RF exposure limits, they do call for the elimination of existing special evaluation exemptions spelled out in §97.13(c) of the Commission's rules. Minor rule changes adopted in the Report and Order section of the document took effect August 5.

In addition the EC will discuss a manufacturer's proposal to delete §97.317(a)(2), requiring that amplifiers operating below 144 MHz "not be capable of amplifying the input RF power (driving signal) by more than 15 dB gain." The Committee will consider whether to propose the rules change described.

The EC will hear status updates on other regulatory matters, including the ARRL's *Petition for Rule Making* filed last November to create a new RF allocation for the Amateur Service at 472-479 kHz. The FCC's ET Docket 11-101 regarding receiver performance standards also will come up for discussion, as will pending amendments of the Amateur Service rules governing qualifying exam systems, Amateur Radio use of TDMA equipment, and remote switching of exam sessions.

Other topics on the EC agenda for review include the FCC's proposed revision of Part 15 rules to permit unlicensed National Information Infrastructure (NII) devices in the 5 GHz band, the effects of communications towers on migratory birds, and amendments to the FCC's CORES system. There has been no recent FCC action on these items.

The EC also will hear a report on the status of the effort to have the "Emergency Communications Enhancement Act of 2013" introduced in the 113th Congress. The objective of the League's draft bill is to authorize from Congress to the FCC to extend the existing limited preemption of state and local regulation of Amateur Radio station antenna structures to private land use regulations.

International: IARU Administrative Council Studying Ways to Work with Non-IARU Organizations

The International Amateur Radio Union (IARU) Administrative Council (AC) is looking into ways to work with non-IARU Amateur Radio organizations in countries where the IARU member society may not be representing all of that country's hams. The issue came under discussion at the annual AC meeting September 21-22 in Concun, Mexico.

"For example, same do not participate in their regional organization activities, some do not pay their regional dues, some are unwilling to handle non-member QSL cards even on a cost-recovery basis and some even fail to respond to inquiries from their regional organizations," an IARU news release on the meeting said. "In many of these countries, there are other non-IARU member societies. The Administrative Council is studying ways to encourage these societies to become IARU members and to improve the relationship between the IARU and these societies."

According to the IARU, possible solutions could include establishing communication with the non-IARU societies to allow input from the country's amateur community or IARU and amateur-related issues or by recommending the use of EC bureaus that will serve all amateurs within a particular country.

The AC is responsible for the policy and management of the IARU and consists of the three IARU international officers and two representatives from each of the three IARU regional organizations (Region 1, Region 2 and Region 3).

Other AC actions:

• reviewed IARU positions for World Radio Conference 2015 agenda items and future WRC agenda items and discussed the strategy for achieving IARU objectives at WRC-15.
• named David Wardlaw, VK3ADW, and Wojciech Nietrzeba, SP5XPX, as joint recipients of the Michael J. Owen VK3KI Award. Both have contributed time, effort, and expertise to the IARU for many years. The AC created the award to recognize individuals who best exemplify the dedication and hard work of IARU volunteers.
• adopted the theme "Amateur Radio: Your Gateway to Worldwide Communications" for the next World Amateur Radio Day, April 18, 2014.

International: First IARU Region 2 Emergency Communications Workshop Focuses on Awareness, Cooperation

The first IARU Region 2 Emergency Communications Workshop, held September 24-25 in Cancun, Mexico in conjunction with the IARU Region 2 [illegible] General Assembly, explored international issues facing Amateur Radio's response to emergencies and disasters. Sponsored by IARU Region 2 and the ARRL, the event was co-chaired by ARRL Emergency Preparedness Manager Mike Corey, KI7XI, and IARU Region 2 Emergency Coordinator Dr. Cesar Paz Santos, XAUP.

Participants represented many nations within and outside of Region 2 – Mexico, Honduras, Trinidad and Tobago, Peru, Chile, India, Australia, Canada, US, and Panama. Over the two-day session, attendees heard presentations that covered ITU response to disasters, technical innovations in disaster response, the *IARU Emergency Communications Handbook* project, and organizational updates. Attendees and presenters also took part in a tabletop exercise. Discussions inside and outside the workshop focused on several key points.

• There is a need for greater public education on the value of Amateur Radio. The general public as well as served agencies need to be aware of what Amateur Radio can do and why it is valuable.
• The IARU should consider approaching the ITU about developing partnerships with Amateur Radio equipment manufacturers to assist with the communications response to large international disasters.
• There should be more participation from young amateurs as presenters and attendees in international emergency communications workshops such as this and ARRC.
• Cross border cooperation and coordination is a key component of success. Hams must be aware of the rules and regulations in the countries that they may arise in international response.
• There is a greater need from served agencies for high-speed video, data, and high resolution imagery.
• More input is needed for the *IARU Emergency Communications Handbook* project.

DX: Government Shutdown Stalls KP4 Wake Island DXpedition

The long-anticipated KP4 Wake Island DXpedition has been put on hold because of the US government shutdown, "pending a revised schedule," the organizers said on an announcement on the KP4 webpage. The DXpedition was expected to kick off October 7 and continue until October 18. It depends upon availability of USAF transport aircraft, and flights are only every 2 weeks.

"We will announce new dates for the DXpedition as soon as possible," the announcement continued. "Thank you for your patience and understanding."

Some team members were reported to have been planning to fly out to the Pacific today. According to an announcement in late September, the Wake Atoll commemorative team was in its final stages of preparation, with all equipment received in Hawaii for transport to Hickam Air Force Base for delivery to Wake Island. – *Thanks to The Daily DX*

DX: ON4 via Bureau? Check First!

Fred Laun, K1ZO, who manages the NCDXA/ARRL Third Call Area Incoming QSL Bureau, advises operators who routinely send cards "via the bureau" to first check the DX station's QRZ.com or personal websites first to find out if the DX station replies to cards sent via the bureau.

Fred Laun, K1ZO

"Each month our bureau receives hundreds of cards for rare DX stations and DXpeditions who…state that they will not answer bureau cards," he says. "We recognize that one cheque people use the bureau so that they don't have to check QRZ.com or another online lookup service before sending off the card."

Laun says his bureau spends many hours each month redirecting such cards "to the proper address or to the trash can. Unfortunately, that is the case with many cards," he adds, "almost all of these cards will not be answered anyway."

The bottom line: "If an operator says he/she will not answer bureau cards, he/she is all likelihood means it," Laun says. "That means that there is no cheap way to get around the 250 dollar's QSLing! Unfortunately, this information rarely makes it to the DX station's QSLing[illegible] instructions. Another note that some operators have informed the bureau that they don't want to get bureau QSL cards. This bureau sends most of those unwanted cards to Tom Rouse, K3CX, for use on his Ham Gallery website, while it provides others to schools for classroom use. – Thanks to *The Daily DX*

Events: Scouting's Jamboree on the Air 2013 Will Be the Last for HAMS

The 2013 running of Scouting's Jamboree on the Air (JOTA) is less than a month away. The OATS 2073 will take place the weekend of October 19-20, from 0000 local time Saturday to 2359 local time Sunday. JOTA gives members of the Boy Scouts of America a chance to experience Amateur Radio firsthand, perhaps planting the seed for a lifetime of licensing. But this year's running of the world's largest scouting event will be the last for the Amateur Radio community. The Boy Scouts of America has announced that it will be dropping Amateur Radio as a JOTA activity, effective with the 2014 event.

JOTA attracts nearly 750,000 Scouts, participating from 40000 stations in 200 countries. JOTA's goal is to foster Scout-to-Scout communication around the world, to encourage Scouts to talk to each other and learn about one another's activities and interests. The JOTA guidelines offer suggested frequencies and additional information.

Licensed amateurs often open their stations to Scouts on JOTA weekend, serving as control operators. Radio operation will be on 80 through 6 meters and 2 meters and 70 centimeters FM simplex, all modes. Last year more than 10,500 US Scouts took part in JOTA from more than 200 stations – up by nearly 500 percent from a year earlier. – *Some information from The Daily DX*

Events: 2013 US Direction Finding Competition Starts October 8

The 13th USA Amateur Radio Direction Finding (ARDF) Championships of on-foot hidden transmitter hunting gets underway in North Carolina October 8-13. Bachanadi Orienteering Klub (BOK) will host the event. This year's USA Championships are being combined with the Seventh ARDF Championships of International Amateur Radio Union (IARU) Region 2 (the Americas). An e-mail reflector is available for Q&A with the organizers as well as for coordinating transport. Read more on the 2013 USA ARDF Championships webpage. – *Thanks to ARDF Coordinator*

People: Brighteon.TV Broadcasts Ham Radio Message

Effective October 1, Nate Brighteon, KG5CC, has reluctantly resigned as the WR5R Wireless Room Manager aboard the Queen Mary museum ship, anchored in Long Beach, California. Brighteon cited his recent illness and hospitalization and his advanced age – he turns 96 on October 9 – as reasons for his decision.

Brighteon was the WR5R Wireless Room Manager for 10 years, plus another 10 years arranging for the QSY@R "Last Voyage" Amateur Radio operation and establishing WR5R, the Associated Radio Amateurs of Long Beach club station.

In a farewell statement, Brighteon said ham radio operations now aboard some 90 museum ships such as the Queen Mary have introduced Amateur Radio to millions of people. "These amateurs give the public direct personal information on how Amateur Radio benefits the public," he said. "This means of introducing Amateur Radio to the public is the biggest publicity stunt ever for Amateur Radio, and we should be proud that it all started with the Queen Mary."

Succeeding Brighteon in his second in command, David Akins, N6HHR.

People: Raleigh "Lee" Shahlee, W4BR, SK

Raleigh "Lee" Shahlee, W4BR, of Newport Beach, California, died September 23 following a brief illness. He was 91. Born in Iowa, he co-founded Shahlee Corporation with his father and brother in 1956 – pioneering radio/tv stations and nutritional products and following with an assortment of "green" household and personal products. Shahlee Corporation became a *Fortune 500* company traded on the NYSE. The business was sold in 2005, and Lee retired.

Lee Shahlee, W4BR

First licensed in 1937 as WN9QVA, Shahlee says in his online biography that he got interested in DX and contesting the following year and began experimenting with high-Q high antennas. World War II broke out while Shahlee was attending UC Berkeley; he joined the Navy and became involved with the then-cutting edge radar systems. He spent 25 years on the Pacific Theater, where he contracted malaria, leaving the Navy in 1945. After the war, he resumed hamming, experimenting a lot on 10 meters with various antennas that combined drivers and parasitic elements and with new HF techniques. He obtained WB6B in 1948, and in 1957, he co-founded and funded the Northern California DX Foundation (NCDXF).

In 1986, after a slow period in ham radio, he sought out and found his dream location near Boise, California, and his Radio Ranch became a reality. "After more than 70 years of hamming and with a new sunspot cycle, this is a dream come true," he wrote. Shahlee had plans to establish a 501(c)(3) foundation to leave the Radio Ranch for clubs and new hams. Shahlee could remotely control his Radio Ranch station from his home in Newport Beach. – *Thanks to Jeff Davis, K6MHZ, for the information*

People: HF Design Pioneer Warren B. Bruene, W5SLY, SK

Warren Bruene, W5SLY

Warren B. Bruene, W5SLY, of Richardson, Texas, died September 28. He was 98. A pioneer in HF communications, Bruene worked closely with the late Art Collins, WB5VZE, on many aspects of HF design during his 50 years with the Collins Radio/Rockwell Collins.

"I worked at Collins Radio for many years and knew Warren," Rockwell Collins Chairman Emeritus Arthur Collins, W5AC, told ARRL. "He was a brilliant engineer and a wonderful colleague and friend." The HF design world has lost an outstanding engineer."

Bruene was a longtime member of the IEEE, the Richardson Wireless Klub, Collins Collectors Association and other organizations. He held 23 patents and authored numerous articles for technical publications. He designed transmitters for the Strategic Air Command and the house of Garrison. He was recognized for his work with the Professional Achievement Citation in Engineering from Iowa State University. Services were October 3 in Texas.

People: WW II POW, Bronze Star Recipient Dorothy D. Thompson, KF5IZ, SK

Dorothy D. Thompson, KF5IZ, of San Antonia, Texas, died September 2. She was 93. Born and raised in China where her grandparents were missionaries, Thompson – then Dorothy Davis – came to the US and graduated from nursing school. After the Japanese invaded China, her family fled to the Philippines.

Dorothy D. Thompson, KF5IZ

She traveled to Manila, reunited with her parents and began working in a hospital there, but when Manila fell to the Japanese, she and her family found themselves in an internment camp. While there she put together a HS-bed infirmary, using her nursing skills to care for the captured. After nearly 2 years' imprisonment, she became gravely ill with rheumatic fever and was released with her mother in a prisoner exchange.

Months later, and then a US Army Nurse Corps second lieutenant, she returned as one of the liberators of the POW camp. Reunited with her father and sister, she remained in Manila as a nursing assignment, going on to win the Bronze Star and earn a promotion to first lieutenant (and later to captain). Thompson later detailed her POW experience in *The Road Back: A Pacific POW's Liberation Story*.

At about this time she met and married Jack Thompson, later USAFI (SK). After a nursing career in the US, she retired as director of nursing at Methodist Hospital. She and her husband became avid RVers and extremely active with the Red Cross and the Military Affiliate (now Auxiliary) Radio System (MARS). She and her husband had keen ARRL members.

A memorial service is set for October 4, 10 AM, at St Paul's Episcopal Church, 5151 Broadway, San Antonio, Texas. Interment will be at the Houston National Cemetery. – *Thanks to John Digsby, N7UVR, www.neveldmemorable.com*

People: Jon Kummer, WA1ZCR, is Now Advertising Chief at CQ

Jon Kummer, WA1ZCR, has been named to head CQ Communications' advertising department. He succeeds Charlie Payne. Kummer will oversee advertising for *CQ Amateur Radio*, *Popular Communications*, *CQ VHF* and *Worldradio Online* magazines. Kummer previously was on the advertising staff for *CQ Amateur Radio*, *Popular Communications* and *Worldradio Online*, as well as for *Modern Electronics* and *Electronic Servicing & Technology* when those were CQ publications. An avid collector and reviewer of antique radios and TVs, Kummer is the editor and publisher of *Antique Radio Classified*. – *CQ Communications*

Getting it Right!

In the story, "Amazing Help: Ham Plug Critical Role in Colorado Flood Evacuation," which appeared in the *ARRL Letter*, September 26, 2013, we inadvertently swapped the call signs of Mountain Emergency Radio Network Volunteers Karel Kaspar, KG8RPO, and Steve Coles, KG8RFZ. The story "National Silent Key Archive Includes Unique Call Sign Lookup" which appeared in the *ARRL Letter*, September 26, 2013, requires some amplification. The National Silent Key Archive" of Amateur Radio Operators (SKARO) – founded now includes the "Unique Call Lookup" utility, carried over from Carroll's now-defunct Vanity KC web site. The Unique Call Lookup permits users to research the history of a given call sign.

Solar Update

Ted "Sunshine on My Shoulders" Cook, K7RA, reports from Seattle: Solar activity weakened again, with the average daily sunspot number dropping from 75.9 to 52, and average daily solar flux down three points to 106.8, when compared to the previous week.

Geomagnetic activity was up, with planetary A index at 20 on October 2, mid-latitude A index at 29, and the high latitude college A index at 62.

The cause of the upset was a coronal mass ejection barreling toward Earth at 2,000,000 MPH on September 29. Geomagnetic storms class geomagnetic storm on October 2 and auroral displays well south of the Canadian border.

Predicted solar flux values:
110 on October 3-7
105 on October 8 and 9
95 on October10-12
100 on October 14-15
105 on October 16-18
110 on October 19-24.
Predicted planetary A index:
20 on October 3
8 on October 4
5 on October 5-7
8 on October 10-11
5 on October 12-13
8, 10 and 8 on October 14-16
5 on October 17-20
8 on October 21-22
5 on October 23-26.

In this week's bulletin look for an updated forecast, some reader reports and updated sunspot averages. I hope the flow of data does not end as the federal government shutdown continues.

Upcoming ARRL Section, State and Division Conventions and Events

• Oct 4 – MS Weekly Sprint
• Oct 4-6 – DELTA TUXL Anniversary Party
• Oct 5 – NJ Fall Sprint
• Oct 5 – SC Autumn Phone Sprint
• Oct 5-6 – EMC Russia DX Contest
• Oct 5-6 – Oceania DX Phone Contest
• Oct 5-6 – Worked All Britain HF Contest
• Oct 6 – RSGB 21/28 MHz Contest
• Oct 6 – RSGB 21/28 CW Contest
• Oct 7 – OKDAC Memorial Contest
• Oct 8 – 432 Mini Fall Sprint
• Oct 8 – 432 Mhz Fall VHF Sprint
• Oct 9 – CWops Monthly Mini-CWT Test
• Oct 10 – SSB-SX Sprint
• Oct 10 – NAQCC Monthly CW Sprint

Upcoming ARRL, State and Division Conventions and Events
• October 4 – Maryland State Convention, West Friendship, Maryland
October 11 – Pacific Northwest VHF Conference, Moses Lake, Washington
• October 11-13 – Southern California Contest Club Convention, Ontario, California
• October 12-13 – Florida State Convention, Melbourne, Florida
• October 13 – Connecticut State Convention, Meriden, Connecticut
• October 13 – Iowa State Convention, Hergenrt Bluff, Iowa
• October 18-19 – Microwave Update Conference, Morehead, Kentucky
• October 19-20 – Oklahoma State Convention, Stillwater, Oklahoma
• November 2 – Fall TechFest, Lakewood, Colorado
• November 2-3 – Georgia Section Convention, Lawrenceville, Georgia
• November 8 – Ohio QSO Party Conference, Mansfield, Ohio
• November 9 – Ohio ARRL Conference, Mayfield Heights, Ohio
• November 16-17 – Indiana State Convention, Fort Wayne, Indiana
• December 6-7 – West Central Florida Section Convention, Plant City, Florida
Find conventions and hamfests in your area.
