

DMR Bridge

If you are active on Allstar, DMR or Echolink, you might be interested in a project I've been working on. I have put up an analog to digital bridge on a hub node:

Allstar Node 48909

Brandmeister Talk Group 3104925

and Echolink node NV6V-L (232055)

are all linked together.

Feel free to connect to any of these any time you like. The hub node is not connected to the CARS repeater, but I plan to be connected (through my Allstar node at home) to the hub during tonight's CARS repeater net. Also, I will play Amateur Radio News through the hub around 7:00 (before the CARS net) and ARRL News after the net.

More Info:

AllStar

Brandmeister DMR

EchoLink
