

# WB6T0U-11      Completes      The Crossing

✖ A period of silence occurred as the small balloon made its trek across the Atlantic Ocean. With hopeful hearts and minds plus crossed fingers, a series of signals were heard from the coast of Lithuania. Telemetry reports the balloons speed at 102 mph Alt is 40,102 ft. At its present course it should cross over into Latvia then enter Russia.

Because of Geo-Fencing its precise landfall could not be determined, could it have passed over Ireland and the United Kingdom? Made it's way across the North Sea then Copenhagen and North of Hamburg?

No transmissions can be heard as it is now night in this part of the World. We eagerly wait for morning to hear from the traveling balloon. Russia will welcome it amerikansky tovarich!
