

Repeater Update

from AE6LA

Rob Sullivan, WB5FTF; Tim Cody, KD6NRB; and I ventured to Fowler Peak Friday and got our new repeater installed. I hear a marked improvement in it's over all performance and look for comments from the members. There is still quite a lot of work to be done but the repeater function is all aligned and sounding great; the remote base and phone patch levels are set and the system sounds better than it ever has.

Decisions need to be made about the old GE MASTR repeater/parts and directions to take with the system on into the future. So I look to a lively Repeater Committee (Fowler Peak Repeater Group) Meeting at 5:30 November 14 with recommendations to the general meeting at 6:30.
